# Introduction

Birth certificates are an important source of public health statistics that are used to improve the health and outcomes of mothers and newborns in Michigan and nationwide. Michigan law requires facilities to report births within 5 days of the date of birth (MCL333.2822(1)(a)). This report, produced from information in Michigan's electronic birth registration system, VERA, assesses the performance of Michigan birth hospitals toward the five day certification goal.

A hospital birth registrar enters parental information and key maternal and child health information into VERA and certifies that the information is correct. Once a record is certified by a hospital registrar, it is filed by the local registrar for the jurisdiction in which the facility is located. In all tables, the number of days to certify births is calculated as the difference between each child's date of birth and the date certified in VERA.

The histogram below shows the distribution of the number of days to certify birth certificates for all birth hospitals in Michigan. The number of days to certify is calculated as the difference between the date of birth and the date each record is certified by the birth hospital as recorded in VERA.

**Statewide, 62.63%% of hospital births were filed in 5 days.**
